

- **PREPARED BY:**

## **DEVELOPERS:**

Yaroslav Morozevych • Yana Muliarska • Andriy Turko

## **MENTORS:**

Viktoriiia Blavatska • Yaroslav Ilnytskyi

Doctors of Sciences in Physical and Mathematical Sciences,  
Institute for Condensed Matter Physics of the  
National Academy of Sciences of Ukraine

- TYPES OF **MODELS** OF EPIDEMIC EXPANSION

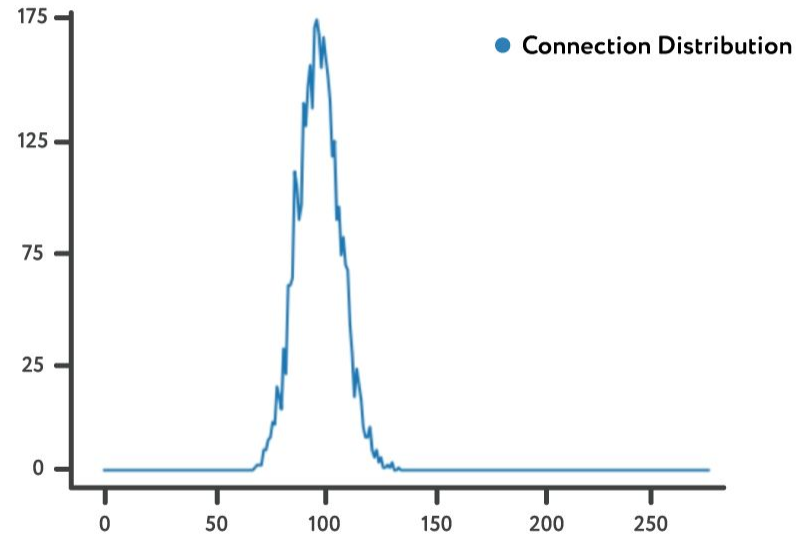

- Scale-Free Network
- Close World Network
- Random Network

- KINDS OF MODEL IMPLEMENTATION

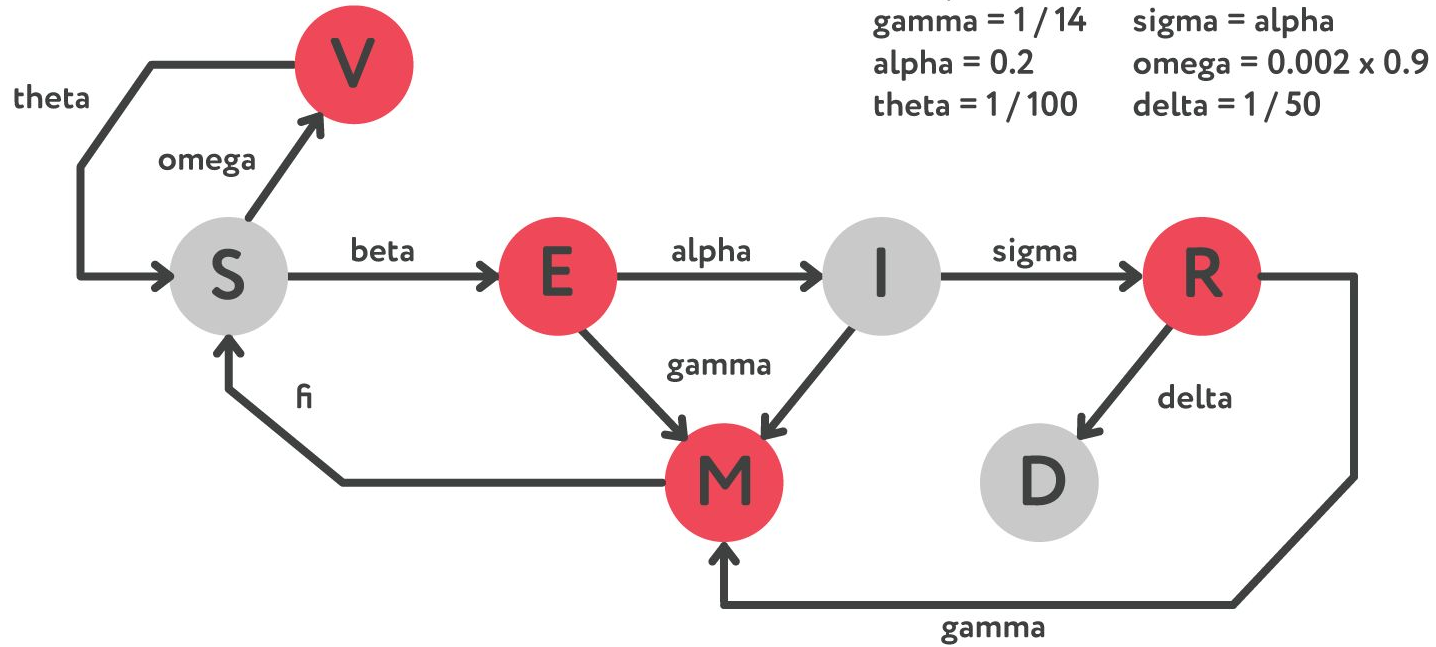

- **CONNECTION DISTRIBUTION**

People Number: 4096

Probability Connect:  $100 / 4096 = 0.025$

- WHAT IS SEIRVDM?

- SEIRVDM RESULTS

On Differential Equations

On Random Network

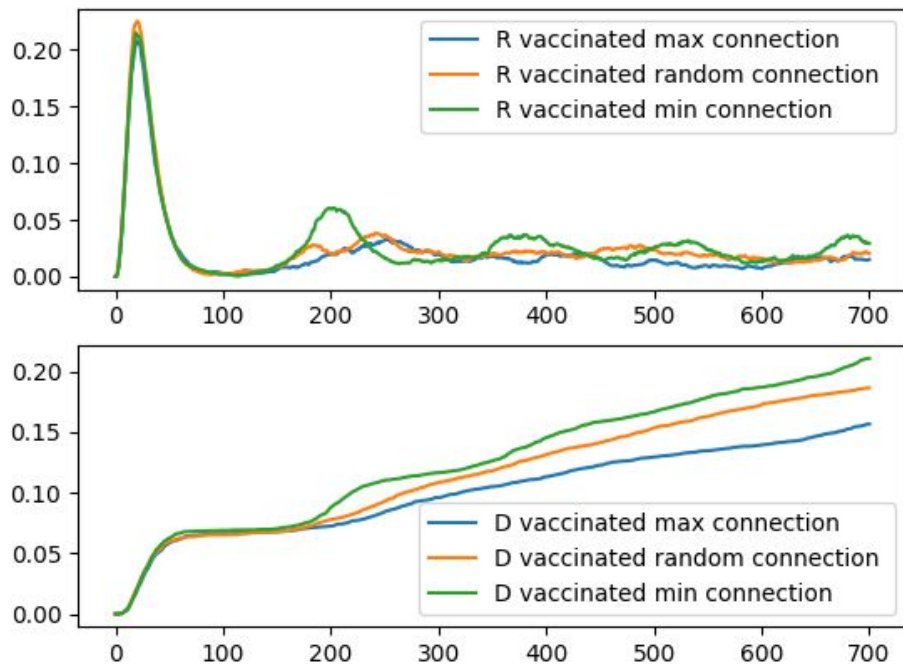

- **WHEN TO VACCINATE**

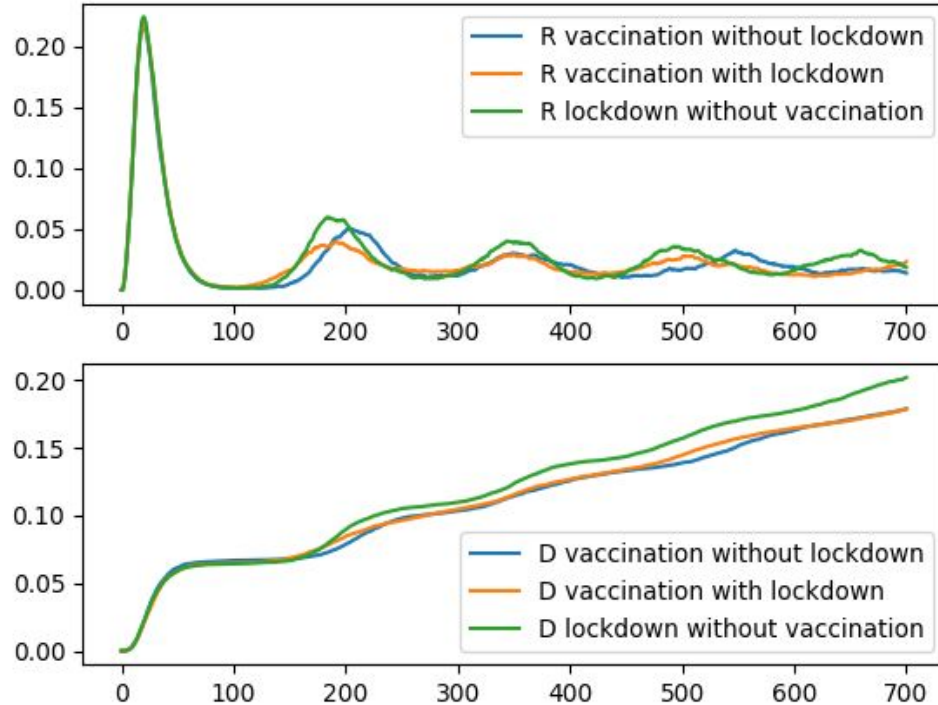

- **WHOM** TO VACCINATE

- **IMPACT** OF LOCKDOWN AND VACCINATION

- **FUTURE PLANS**

- Try out other networks.
- Build and examine more graphs.
- Make some conclusions and write the notes for our Scientific Article.
- Accelerate even more the CUDA program.

- WHY **CUDA**?

## • GOING PARALLEL

1 Block (32 x 32 Threads)

Instruction Executing Cycle on SM:

Step 1: 0-7 Threads execute instruction 1

Step 2: 8-15 Threads execute instruction 1

Step 3: 16-23 Threads execute instruction 1

Step 4: 24-31 Threads execute instruction 1

} 1 Wrap = 32 Threads

Using Advantages of NVIDIA:

4 Wraps x 2 Instructions x 32 Threads = 256 Thread Instructions at 1 Cycle

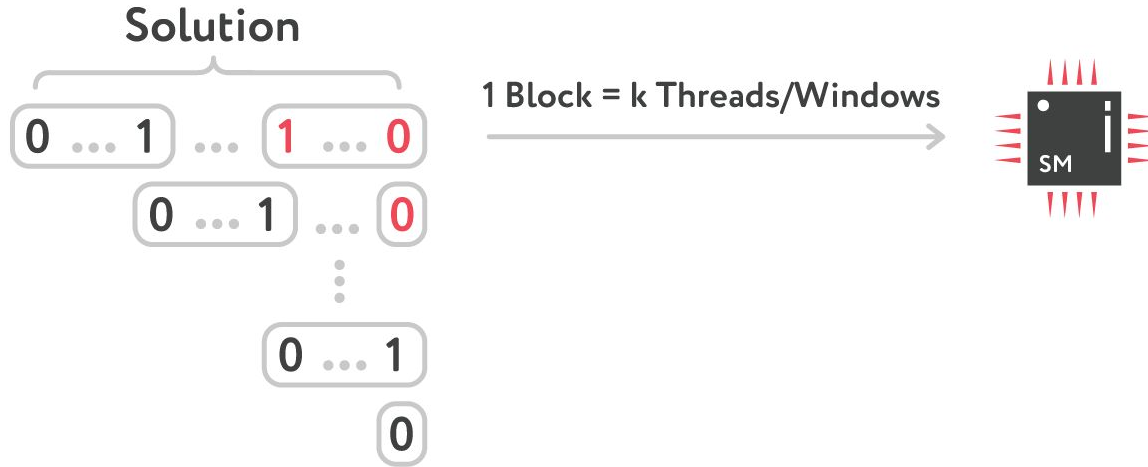

5 SMs x 256 Thread Instructions = 1280 Instructions per Cycle

- MEMORY USAGE **OPTIMIZATION**

- MAKE IT GO **PARALLEL**

- FINAL STATE MACHINE APPROACH

Current	Next	Encoding
S	S	000
	E	00 <b>1</b>
	V	0 <b>1</b> X
	V	<b>1</b> XX

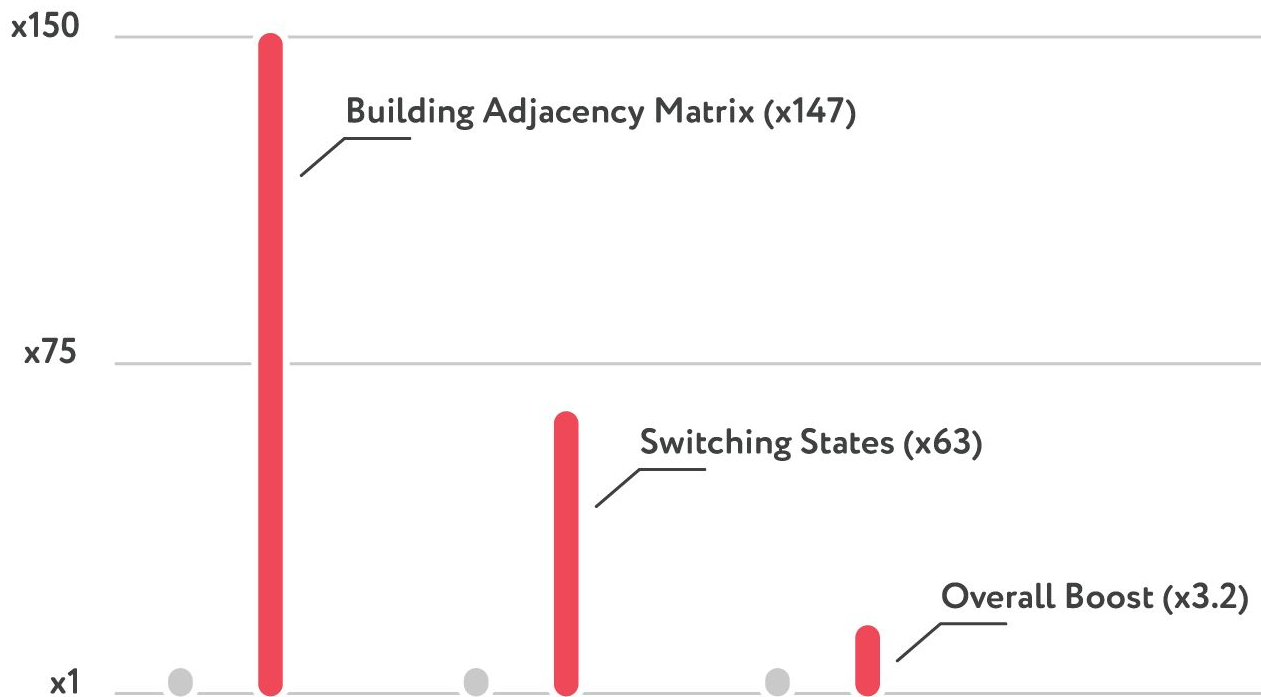

next\_state\_enc = **c** **b** **a**  
                                  3: 2: 1:

next\_state = **ceil**(**log**<sub>2</sub>(next\_state\_enc + 1))

- **CUDA** BENCHMARKS

**Thank You** for Your Attention!
